

Intensive Care Live Video Feed

If leave is needed from the site, a live video feed is streamed to catch any intrusions or needs of the garden.

Specimen Collection Kit

Documented logging of daily tests and patient care information. Kit includes all implements needed for daily sample examinations.

Isolated Radio Blast

Gives seedlings, and plants isolated exposure to music and radio broadcasts. Music choice should be carefully selected from the relevant playlist.

1 Day Evacuation Pass (to Ejector shelf)

Can be granted to specimen's suffering from stress and showing low levels of PH and moisture reading.

Faraday Cage

Plants also suffer from exposure to electromagnetic waves. Place them inside this electromagnetic vacuum for 1 to 2 hours for best results. This may also be used for plants suffering from low levels of PH and moisture reading.

Television Cage

Exposure to the outside world is inadvisable, but many specimens respond well to re-establishing the connection to society. The Television may also be used for entertainment purposes. Be warned that if exposing the plants to a live broadcast, they may respond badly to the current world events. It is advised to avoid the news channels, or use our pre-recorded news broadcast from 1995.
